

The maps provided were generated by computer software. The information was taken from plats, aerials, and topographic maps, intended to provide an approximation of the property and its road access. Both the road locations and parcel boundaries may not be in the proper location, and may not be to scale. These maps should not be relied on to determine actual property boundaries, or used to make purchase decisions.

After looking over the detailed terrain and aerial maps, prior to showing the property, if you have questions about easements, please give us a call.
